Matterhorn Karl Marlantes,2010-04-01 Intense, powerful, and compelling, Matterhorn is an epic war novel in the tradition of Norman Mailer's The Naked and the Dead and James Jones's The Thin Red Line. It is the timeless story of a young Marine lieutenant, Waino Mellas, and his comrades in Bravo Company, who are dropped into the mountain jungle of Vietnam as boys and forced to fight their way into manhood. Standing in their way are not merely the North Vietnamese but also monsoon rain and mud, leeches and tigers, disease and malnutrition. Almost as daunting, it turns out, are the obstacles they discover between each other: racial tension, competing ambitions, and duplicitous superior officers. But when the company finds itself surrounded and outnumbered by a massive enemy regiment, the Marines are thrust into the raw and all-consuming terror of combat. The experience will change them forever. Written by a highly decorated Marine veteran over the course of thirty years, Matterhorn is a spellbinding and unforgettable novel that brings to life an entire world—both its horrors and its thrills—and seems destined to become a classic of combat literature.

In High Places Dougal Haston,2013-02-04 In his own words Dougal Haston covers the years from his childhood in Scotland, where his love of climbing was first sparked, through to his development into perhaps the most formidable climber of his generation; his reputation was forged by his successful ascents of familiar peaks by unfamiliar routes (of which the most famous was the Eiger Direct). Infused throughout with his passion for climbing and his great determination to succeed, In High Places is a compelling and eye-opening portrait of the climber as a young man and a must read for all those with an interest in mountaineering.

The Mountains of My Life Walter Bonatti,2001 The legendary mountaineer describes his adventures in such ranges as the Alps and Himalayas, and provides details of what really happened during a controversial 1954 Italian expedition that made the first ascent of K2.

Mountains Stefan Dech,2016-11-22 Awe-inspiring views of high peaks as they have never been seen before, using cutting-edge satellite technology Mountains marks a new milestone in Earth observation and Alpine exploration. For the first time, a special recording process and a technique developed at the German Aerospace Center (DLR) allow the satellite recording of three-dimensional views from 300 miles above with a resolution in the range of a few meters. Photorealistic images are created in this manner from perspectives denied even to mountaineers and helicopter pilots. In addition to highly accurate detailed models of individual regions, the DLR generates a global three-dimensional elevation model of Earth in unprecedented quality. For this purpose, two German satellites are currently circling the earth at a speed of more than 15,000 miles per hour—separated by a mere 500 feet. Taken together, both techniques offer a detailed view of a world that still pushes human beings to their limits—the mountainous regions of our planet. For this book Reinhold Messner has selected thirteen peaks and routes to feature, as they've never been seen before.

One Little Spark! Marty Sklar,2015-09-01 We've all read about the experts: the artists, the scientists, the engineers—that special group of people known as Imagineers for The Walt Disney Company. But who are they? How did they join the team? What is it like to spend a day in their shoes? Disney Legend Marty Sklar wants to give back to fans and answer these burning questions. When Marty was president of Walt Disney Imagineering, he created a list of principles and ideals for the team, aptly named Mickey's Ten Commandments. Using this code of standards as his organizational flow, Marty provides readers with insights and advice from himself and dozens of hands-on Imagineers from around the globe. It's a true insider's look like no other!

The Summits of Modern Man Peter H. Hansen,2013-05-14 Mountaineering has served as a metaphor for civilization triumphant. A fascinating study of the first ascents of the major Alpine peaks and Mt. Everest, The Summits of Modern Man reveals the significance of our encounters with the world's most forbidding heights and how difficult it is to imagine nature in terms other than conquest and domination.

Feeding on Dreams Ariel Dorfman,2012 Dorfman portrays, through visceral scenes and powerful intellect, the personal and political maelstroms underlying his migrations from Buenos Aires, on the run from Pinochet's death squads, to safe houses in Paris and Amsterdam, and eventually to America, his childhood home. The toll on Dorfman's wife and two sons, the 'earthquake of language' that is bilingualism, and his eventual questioning of his allegiance to past and party – all these crucibles of a life in exile are revealed with wry and startling honesty. Feeding on Dreams is a passionate reminder that 'we are all exiles', that we are all 'threatened with annihilation if we do not find and celebrate the refuge of common humanity', as Dorfman did during his 'decades of loss and resurrection'.

The Lure of the Mountains Herbert Maeder,1975

The Mountain Mystery Ron Miksha,2014-08-01 Fifty years ago, no one could explain mountains. Arguments about their origin were spirited, to say the least. Progressive scientists were ridiculed for their ideas. Most geologists thought the Earth was shrinking. Contracting like a hot ball of iron, shrinking and exposing ridges that became mountains. Others were quite sure the planet was expanding. Growth widened sea basins and raised mountains. There was yet another idea, the theory that the world's crust was broken into big plates that jostled around, drifting until they collided and jarred mountains into existence. That idea was invariably dismissed as pseudo-science. Or utter damned rot as one prominent scientist said. But the doubtful theory of plate tectonics prevailed. Mountains, earthquakes, ancient ice ages, even veins of gold and fields of oil are now seen as the offspring of moving tectonic plates. Just half a century ago, most geologists sternly rejected the idea of drifting continents. But a few intrepid champions of plate tectonics dared to differ. The Mountain Mystery tells their story.

The Life and Times of the Thunderbolt Kid Bill Bryson,2010-04-30 From one of the most beloved and bestselling authors in the English language, a vivid, nostalgic and utterly hilarious memoir of growing up in the middle of the United States in the middle of the last century. A book that delivers on the promise that it is “laugh-out-loud funny.” Some say that the first hints that Bill Bryson was not of Planet Earth came from his discovery, at the age of six, of a woollen jersey of rare fineness. Across the moth-holed chest was a golden thunderbolt. It may have looked like an old college football sweater, but young Bryson knew better. It was obviously the Sacred Jersey of Zap, and proved that he had been placed with this innocuous family in the middle of America to fly, become invisible, shoot guns out of people's hands from a distance, and wear his underpants over his jeans in the manner of Superman. Bill Bryson's first travel book opened with the immortal line, “I come from Des

Moines. Somebody had to.” In this hilarious new memoir, he travels back to explore the kid he once was and the weird and wonderful world of 1950s America. He modestly claims that this is a book about not very much: about being small and getting much larger slowly. But for the rest of us, it is a laugh-out-loud book that will speak volumes – especially to anyone who has ever been young.

Untrodden Peaks and Unfrequented Valleys, a Midsummer Ramble in the Dolomites Amelia Ann Blanford Edwards,1893

Muddy Matterhorn Heather McHugh,2020-06-02 Heather McHugh’s first book in a decade, Muddy Matterhorn, reclaims the mix of high and low that is her sensibility’s signature, in matters practical and philosophical, semantic and stylistic, mortal and transitory, amorous and political, hilarious and heartbreaking. With fierce attacks on technology and social structures, McHugh finds a way to enjoy and empathize with humanity on her own terms. Ever the outsider, McHugh combines a strong sense of self with a determination to love people and the worlds they build without losing her biting criticism or witty rejection of societal norms and expectations. She is both pragmatic and theorizing, esoteric and identifiable. The joy and anger in these poems join to form an empowered and impassioned declaration of self in a chaotic time.

Permafrost Soils Rosa Margesin,2008-10-31 Most of the Earth’s biosphere is characterized by low temperatures. Vast areas (>20%) of the soil ecosystem are permanently frozen or are unfrozen for only a few weeks in summer. Permafrost regions occur at high latitudes and also at high elevations; a significant part of the global permafrost area is represented by mountains. Permafrost soils are of global interest, since a significant increase in temperature is predicted for polar regions. Global warming will have a great impact on these soils, especially in northern regions, since they contain large amounts of organic carbon and act as carbon sinks, and a temperature increase will result in a release of carbon into the atmosphere. Additionally, the intensified release of the climate-relevant tracer gas methane represents a potential environmental hazard. Significant numbers of viable microorganisms, including bacteria, archaea, phototrophic cyanobacteria and green algae, fungi and protozoa, are present in permafrost, and the characteristics of these microorganisms reflect the unique and extreme conditions of the permafrost environment. Remarkably, these microorganisms have been reported to be metabolically active at subzero temperatures, even down to -20°C.

Enter the bustling 'Disneyland Plans Room' at Walt Disney’s custom-designed studio. Disney drew upon the talents of tinkerers and hobbyists, artists, writers, engineers, architects, builders, and—especially—Hollywood art directors to realize his dream.
